

Fluid valve circulation FCV

Accessories for variable displacement pumps

The FCV fluid circulation valve is designed for variable displacement pumps operating in stand-by mode.

It allows continuous oil circulation, preventing overheating and ensuring reliable pump operation over time.

Technical data

- The valve flow varies between 20 and 22 l/min for a ΔP at 30 bar.
- Maximum pressure is 420 bar.
- The closing pressure is 2 bar min. and 7 bar max.
