HYDROPNEUMATIC ACCUMULATORS

BLADDER, DIAPHRAGM BLADDER-DIAPHRAGM, PISTON

The LEDUC hydropneumatic accumulators range

ACS(L)

- Nitrogen capacities from 0.7 to 4 litres
- Maximum pressure 330 bar depending on model
- Low temperature version: -40°F to +212°F (-40°C to +100°C) depending on model

AS

- Nitrogen capacities from 0.005 to 2.64 gallons (0.02 to 10 litres)
- Maximum pressure 5800 psi (400 bar) depending on model
- Extreme operating temperatures (standard) : -4°F to +248°F (-20°C to +120°C)

ABVE

- Nitrogen capacities from 1.06 to 13.21 gallons (4 to 50 litres)
- Maximum pressure 4786 psi (330 bar) depending on model
- Extreme operating temperatures: -4°F to +212°F (-20°C to +100°C)

APL

- Nitrogen capacities from 0.04 to 1.06 gallons (0.16 to 4 litres)
- Maximum pressure 5076 psi (350 bar) depending on model
- Extreme operating temperatures: -4°F to +176°F (-20°C to +80°C)

Operating principle, functions and characteristics

OPERATING PRINCIPLE

► Energy storage

A hydro-pneumatic accumulator is a vessel which, in hydraulic circuits, is capable of storing a large amount of energy in a small volume.

- ① The hydropneumatic accumulator is a tank divided into two chambers by a flexible separator. One chamber is for fluid under pressure, the other for nitrogen gas.
- ② It is pre-charged with nitrogen to a pressure P₀.
- ③ When a fluid travels through the accumulator, and the pressure P_1 of that fluid is higher than the pre-charge pressure P_0 of the accumulator, then the gas compresses to P_1 , the separator changes shape, and the accumulator can take in the corresponding volume of fluid
- 4 Any pressure drop in the hydraulic circuit causes the accumulator to return fluid to the circuit, until pressure reverts to the initial P_0 .

► A simple principle

If the very low compressibility of fluids makes it difficult to store their energy in small volumes, it does, however, enable them to transfer a significant force. Gas on the other hand is highly compressible, and can therefore store considerable amounts of energy in small volumes. The hydropneumatic accumulator makes use of these two properties.

FUNCTIONS

► Surge control

The accumulator takes in the cinetic energy produced by a moving column of fluid when the circuit is suddenly shut off (valve, solenoid etc.), or more generally, when there is a sudden change in circuit pressure.

► Thermal expansion

The increase in volume due to increased temperature will be absorbed by the LEDUC accumulator.

► Shock absorbing-suspension

LEDUC accumulators, in a shock absorbing function, reduce fatigue of hydraulic and mechanical components.

Examples: lifts, forklift trucks, agricultural machinery, construction equipment, etc.

► Energy recovery and restitution

The energy supplied by a given load can be absorbed by the accumulator and put back into a hydraulic cylinder to produce a mechanical movement.

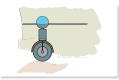

Example: closing railcar hopper doors.

► Leak compensation

A leak in a hydraulic circuit can lead to pressure drop. The LEDUC accumulator compensates the loss in volume and thus maintains circuit pressure virtually constant.

► Pulsation dampening

Adding a LEDUC accumulator to a hydraulic circuit smooths out any flow irregularities from the pumps. This leads to better operation of the system, protection of the components and thus increased service life, and reduced noise levels.

Example: dosing pumps.

► Transfer of fluid

The LEDUC accumulator makes it possible to transfer hydraulic pressure between two incompatible fluids, via the diaphragm which separates the two fluids.

Examples:

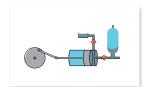

- transfer between hydraulic fluid and sea water
- test bench, etc.

► Energy storage

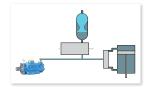

In a circuit under pressure, the LEDUC accumulators mean a reserve of fluid may be kept permanently available. Thus a large amount of energy, accumulated by a low power system during periods of low or no usage, can be used in a very short time and within one cycle.

Examples:

- automatic machines
- braking or declutching of vehicles or construction equipment
- emergency completion of working cycle in case of failure of main power source.

CHARACTERISTICS

Main characteristics	Diaphragm	Bladder	Bladder-diaphragm	Piston
Volumetric ratio (capacity to store a volume)	0.75	0.75	0.75	Without limit except to reach service pressure
Mounting position	For higher volumetric ratio, vertical position preferred	Vertical position	Vertical position	Any positions
Capacity for total discharge	Yes	No, except particular conditions	Yes, in particular conditions	Yes
Flow control	No	No	No	Yes
Control of the presence of fluid	No	Reduced	No	Yes (indicator possible)
Use with special fluids	Limited	Limited	Limited	Suitable (special seals)
Service life	Good	Good	Good Good	
Resistance to contaminations	Good	Good	Good	Low
Response time	Good	Medium	Good	Low
Maintenance interval	Short	Short	Short	Long

ACS(L) Welded cylindrical accumulators

► Technical description

The ACS(L) type welded accumulators are made up of a shell in high resistance steel containing a fluid-gas bladder-diaphragm. This bladder-diaphragm is made of nitrile for the standard ACS range, and of hydrogenated nitrile for low temperature applications. The bladder-diaphragm is fitted with an anti-extrusion stud, thus allowing rapid and total discharge of the accumulator.

▶ Advantages

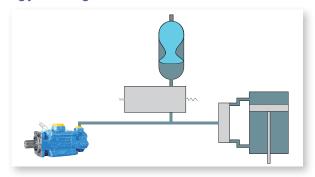

- Low temperature versions suitable for operation at temperatures down to -40°F (only for ACS)
- Completely modular from 0.18 to 1.06 gallons (0.7 to 4 litres).
 This design concept means easy addition of intermediate models if required
- The bladder-diaphragm offers exceptionally good resistance to fatigue
- Rapid and total discharge possible due to the anti-extrusion stud actually fitted onto the bladder-diaphragm.

▶ Operating fluids

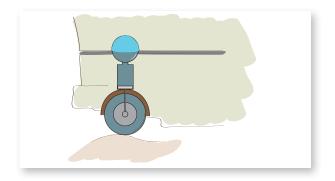

- Mineral-based hydraulic fluids
- Other fluids: please ask.

Examples of applications

Energy storage

Suspension

ACS 4786 psi (330 bar)

Maximum pressure: 4786 (330 bar) Extreme operating temperature:

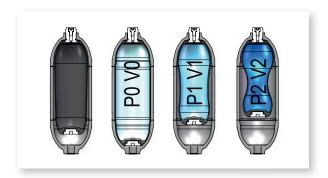

- Standard version: -4°F to 212°F (-20°C to +100°C)
- Low temperature version: -40°F to 212°F (-40°C to +100°C)

ACSL 3626 psi (250 bar)

Maximum pressure: 3626 psi (250 bar) depending on the version. Extreme operating temperature:

Standard version: -4°F to 212°F (-20°C to +100°C)

▶ Deformation of the bladder-diaphragm

► Filling gas

Nitrogen only.

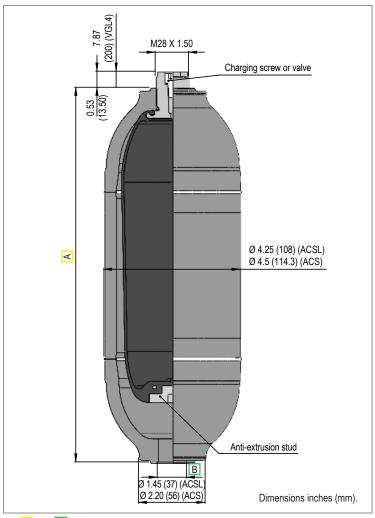

► Volumetric ratio (V0-V2)/V0

The recommended volumetric ratio of this type of accumulator is 0.75. For example: an ACS 4 accumulator can take in a maximum volume of 0.75 V0 = 0.75 x 4 = 3 litres.

► Tests et certifications

Designed and certified according to the European Directive 2014/68/UE. Other certifications on request.

Tightening torque of the fixation screws: 14.75 lbf.ft (20 Nm).

AS Spherical accumulators

► Technical description

LEDUC spherical accumulators consist of two hemispherical shells which are screwed together and which hold a diaphragm. This diaphragm has a metal stud which closes off the operation hole when the fluid is completely discharged. There is therefore no danger of damage to the diaphragm.

The gas side port is fitted with a charging valve allowing the pressure in the accumulator to be checked or changed.

Separator:

- Standard, Nitrile: from -4°F to + 212°F (-20°C to +100°C)
- Other diaphragms are available on request.

► Advantages

The diaphragm only changes position, the elastomer in fact works little. The LEDUC spherical accumulator owes most of its qualities to its diaphragm and metal pin:

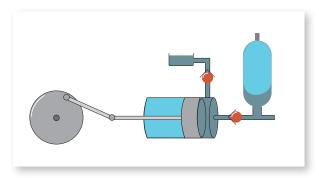

- excellent gas/fluid tightness
- possibility of total and rapid discharge
- can be adapted to suit a wide range of fluids hanged.

▶ Operating fluids

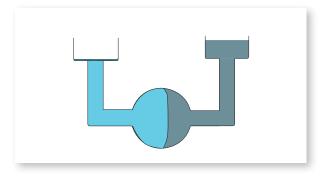

- Mineral-based hydraulic fluids: standard diaphragm
- Corrosive or non-standard fluids : please consult our Customer Service Department.

► Examples of applications

Pulsations dampening

Transfer

AS 5800 psi (400 bar)

Maximum pressure : 5800 psi (400 bar) (except for AS 0.7 L) Extreme operating temperature:

Standard version : -4°F to +248°F (-20°C to + 120°C)

► Deformation of the diaphragm

► Filling gas

Nitrogen only.

► Volumetric ratio(V0-V2)/V0

The volumetric ratio of this type of accumulator is 0.75.

For example: an AS 1 accumulator can take in a maximum volume of 0.75 V0: 0.75 V0 = 0.75 x 1.1 = 0.82 litres.

▶ Protection

On request, ARCOR® anti-corrosion treatment or paint.

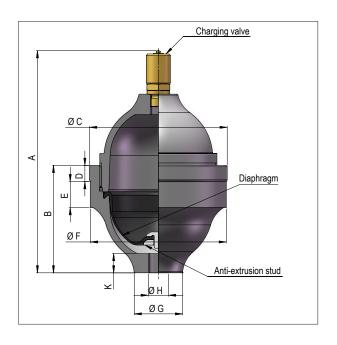

► Tests and certifications

Designed and certified according to the European Directive 2014/68/UE. Other certifications on request.

► After-sales service

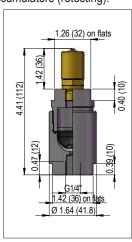

HYDRO LEDUC provides after sales service, supplies spare parts and can requalify your accumulators (retesting), only for the accumulators operated in France.

ABVE Bladder accumulators

► Technical description

The ABVE bottle type accoumulators consist of :

- a forged steel body
- a bladder
- a charging valve
- an oil side orifice fitted with a poppet valve which prevents extrusion of the bladder, and an air bleed screw used during system start-up.

Advantages

Bladder accumulator component parts are interchangeable with those of major accumulators available.

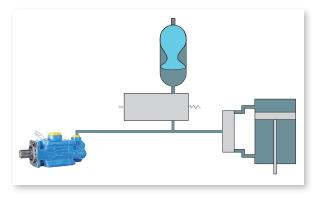

Dimensions allow for easy installation and also use in batteries.

► Operating fluids

- Mineral-based hydraulic fluids: standard bladder
- Non-standard and/or corrosive fluids: please consult our Customer Service Department.

Examples of applications

Energy storage

ABVE 4786 psi (330 bar)

Maximum pressure: 4786 (330 bar) ABVE 4 maximum pressure: 5076 (350 bar)

Extreme operating temperature:

Standard version: -4°F to +212°F (-20°C to +100°C)

▶ Deformation of the bladder

► Filling gas

Nitrogen only.

► Volumetric ratio (V0-V2)/V0

The volumetric ratio of this type of accumulator is 0.75.

For example, an ABVE 4 accumulator can take in a maximum volume of : 0.75 V0 = 0.75 x 3.7 = 2.8 Litres.

► Tests et certifications

Designed and certified according to the European Directive 2014/68/UE. Other certifications on request.

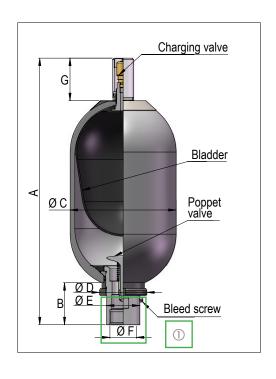

HYDRO LEDUC tests its ABVE accumulators for 2 000 000 cycles with a ΔP = 4351 psi (300 bar).

► After-sales service

HYDRO LEDUC provides after sales service, supplies spare parts and can requalify your accumulators (retesting) only for the accumulators operated in France.

AP(L) Piston accumulators

► Technical description

APL accumulators are designed with a high mechanical resistance forged steel body.

The fluid-gas separating piston is equipped with seals adapted to :

- the fluids to convey
- the operating temperature

The APL accumulators can be fitted with a charging screw or charging valve, and are a modern solution for the needs of hydraulic circuits.

► Advantages

LEDUC APL piston accumulators, are designed:

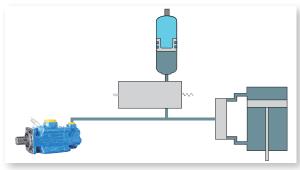

- to withstand very high volumetric ratios
- to ensure total and rapid discharge of fluid
- for assembly in any position
- to guarantee minimal nitrogen loss overtime
- for easy adaptation for use with different fluids and temperatures.

▶ Operating fluids

- Mineral-based hydraulic fluids.
- Non-standard and/or corrosive fluids: please consult our Customer Service Department.

► Example of applications

Energy storage

APL 5076 psi (350 bar)

Maximum pressure: 5076 (350 bar) Extreme operating temperature :

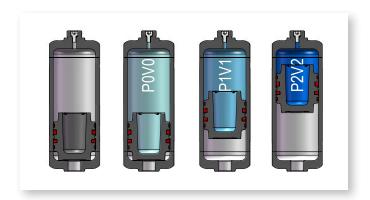

- Standard version : -4°F to 176°F (-20°C to + 80°C)
- For other temperatures, please consult us.

APL 3626 psi (250 bar)

Maximum pressure: 3626 (250 bar) Extreme operating temperature:

- Standard version: -4°F to 176°F (-20°C to + 80°C)
- For other temperatures, please consult us.

► Movement of the piston

► Filling gas

Nitrogen only.

▶ Charging

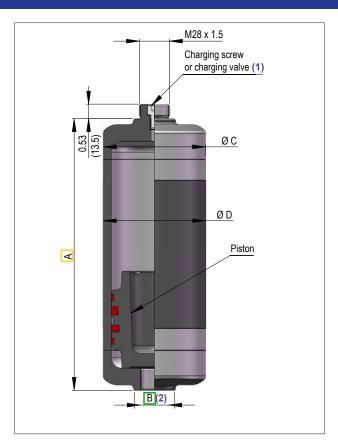

Two versions available:

- with charging screw
- with charging valve.

For AP(L) series accumulators that are supplied pre-charged, P0 must be over 5 bar.

► Tests and certifications

Designed and certified according to the European Directive 2014/68/UE. Other certifications on request.

- (1) See order code system code 06 (next page)
- (2) Hydraulic connections see order code system code 05 (next page)

DESCRIPTION

These safety and shut-off blocks are designed to bring together in a single block the necessary safety organs required for the correct operation of hydraulic circuits incorporating accumulators.

The basic block consists of:

- a ball valve with quarter turn closure, to isolate the accumulator from the circuit
- needle valve ensuring the manual decompression of the circuit
- relief valve (directly operated) set at the maximum operating pressure of the accumulator. This relief valve should never be used as a limiter to protect the hydraulic pump
- the Q version is fitted with a one-way adjustable flow limiter. Mounted on the main block, this limiter controls the accumulator outlet flow, whilst inlet flow remains unrestricted.

► General technical characteristics

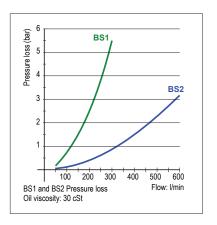

- nominal crossing diameter: 0.63 in (16 mm) (BS 1 Block),
 0.95 in (24 mm) (BS 2 Block)
- maximum working pressure: 5076 psi (350 bar)
- Temperature range : 5 to 158 °F (-15°C to + 70°C)
- fluid: mineral based hydraulic oil (for other fluids please contact our Customer Service department)
- flow: see pressure loss graph
- relief valve (nominal diameter): 0.24 in (6 mm) (BS1), 0.39 (10 mm) (BS2)
- BS2 safety block output side connection : standard 5800 psi (400 bar) CETOP flange
- Fitted with FKM seals.

NB: as standard, BS2 is fitted with a 2" port (accumulator side).

The safety and shut-off blocks are available in a simplified version.

They consist of a relief valve (directly operated) set at the maximum operating pressure of the accumulator. This relief valve should never be used as the limiter to protect the hydraulic pump.

► Graph of pressure drop as a function of flow

ORDER CODE

To obtain the code of your safety block, complete the different parameters from 01 to 06 in the table on the left according to the options you require (see table below).

BS					
01	02	03	04	05	06

Make your choice as a function of the possible combinations, using the columns below, and use the code in the far right-hand column.

Тур	Туре											
01	Safety blocks				BS

CHARGING AND GAUGING DEVICE

Reference: VGL 4 066660

Description:

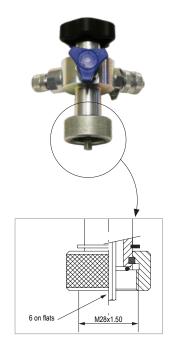

The VGL 4 charging and gauging device is the essential instrument to the check and to bleed the accumulator nitrogen.

The VGL 4 includes:

- a charging device VGL 4 for gas valve M 28 x 1,50
- a pressure gauge kit from 0 to 5800 psi (400 bar)
- an adapter for connection to gas valve M 16 x 200.

Technical characteristics:

- max. pressure: 5800 psi (400 bar)
- pressure gauges: Ø 2.48 in (63 mm) with rear connection suitable to control nitrogen pressure of accumulators fitted with P1620 valves
- scale 0 to 5800 psi (400 bar) (or other on request) with accuracy of 1.6
- the universal charging device has a female adapter M28X1.50
- 6 mm "Allen" key.

CHARGING KIT

Reference: CGLU 4F 066650

Designed to work with operating pressure up to 5800 psi (400 bar).

Includes:

- VGL 4 universal pressure charging and gauging device (M28 x 1.50 outlet)
- one pressure gauge from 0 to 363 psi (25 bar)
- one pressure gauge from 0 to 3626 (250 bar)
- (additional pressure gauges on request 0-1450 psi; 0-5800 psi (0-100; 0-400)
- adapters for connection to charging valves (M 16 x 200 5/8" 18UNF G3/4" 7/8" 14UNF 8V1)
- 78.7 in (2 m)-long hose, for connection to a source of nitrogen, max. pressure at 5800 psi (400 bar) as standard (fitted with adapters for French or German bottles)
- 6 mm "Allen" key
- spare seal kit.

Precautions and maintenance

► Installing your accumulator:

Before installation, it is essential to visually check the accumulator for any external damage.

For optimal operation, the accumulator should be placed as close as possible to the application. It should be installed in a vertical position with the charging valve or screw at the top. For use in a horizontal position, please contact our Technical Department. The accumulator should be installed in an easily accessible place and be fixed using robust collars I, a seat etc.

It is strictly forbidden to make any modification to the accumulator (welding, grinding, machining etc.), or to change the information engraved on the accumulator.

The circuit should include an isolation valve to isolate the accumulator, and also a means of checking that the hydraulic pressure never exceeds the maximum service pressure engraved on the accumulator. The accumulator must be connected to a relief valve $\$ 1 set at the accumulator's maximum authorized service pressure. All of these functions are ensured by HYDRO LEDUC safety and shut-off blocks BS1M and BS2M (see pages 26-27).

Suitable fluid: mineral-based hydraulic fluid or equivalent. For other fluids, please consult our Technical Department.

The service life of the accumulators is highly dependent on the quality of the hydraulic fluid and level of cleanliness.

We recommend the following minimum cleanliness:

- Cleanliness class 9 according to NAS1638;
- Cleanliness class 6 according to SAE;
- Cleanliness class 20/18/15 according to ISO/DIS 4406.

Start up:

Accumulators are supplied either with a pre-charge pressure for storage of around 5 bar, or with pre-charge pressure as specified and corresponding to the requirement, calculated depending on working conditions. The pre-charge pressure is engraved on the accumulator shell.

Pre-charge pressure of LEDUC accumulators (all sizes):

For all pre-charge pressures greater than or equal to 20 bar, the tolerance is -2/+6 bar. For a tighter tolerance, please contact our Technical Department.

All pre-charge pressures done by HYDRO LEDUC are adjusted at ambiant temperature of 20°C.

Pre-charge pressure must be checked before start-up: see the recommendations sheet supplied with each accumulator. Check pre-charge pressure, or charge to required pressure level, using the charging and gauging device (see also instructions supplied with the device). The influence of temperature on pre-charge pressure must be taken into consideration. Please note that a slight loss of nitrogen is possible when checking pre-charge pressure.

It is strictly forbidden to use any gas containing oxygen or an air compressor which would lead to danger of explosion.
Use only bottled dry nitrogen.

Check that the hydraulic installation is capable of withstanding the maximum service pressure engraved on the accumulator. Check that maximum service pressure of the accumulator never exceeds the maximum service pressure engraved on the shell and on the name plate.

Volumetric ratio ((V0-V2))/V0) must not be exceeded, see page 5.

Bleed the pipework of any air.

Maintenance:

- Before intervening on any circuit which has a gas filled pressure vessel, the pressure must be discharged from the circuit.
- Check nitrogen pressure during the first few weeks of operation and adjust the frequency of checks depending on application.
- Ensure at every check that the accumulator has been isolated from the circuit, and that there is no more pressure on fluid side. Use the charging and gauging device VGL reference 066660 (see page 30).
 - Be careful to use a manometer with a measuring range compatible with the nitrogen pressure to be checked.
- Visually inspect the accumulator regularly for any signs of deterioration such as corrosion, deformation etc.
- A nondestructive testing (under using responsability), must be made no later than when 50% of the allowable number of cycles is reached.
- For cleaning recommendations and precautions: please contact our Technical Department.
- For spare parts, only use LEDUC parts. The user is not authorized to change any part of the acuumulator without the manufacturer's prior approval. An accumulator is made up of sub-assemblies. Any modification not authorized by the manufacturer and its notified body invalidates the CE certification of the whole accumulator.

► Legislation

Hydraulic accumulators are gas pressure vessels.

The manufacture of such products must conform to European Directive 2014/68/ UE.

Local regulations and legislation must be strictly respected regarding the use of accumulators.

► Pressure Equipment Directive (PED) 2014/68/EU

LEDUC accumulators up to and including 1 litre capacity are supplied with a declaration of conformity and instruction manual. They cannot be stamped CE, but conform to the Directive 2014/68/UE.

LEDUC accumulators with capacity greater than 1 litre are supplied with a declaration of conformity and instruction manual. They bear the CE stamp and the reference of the official organisation certifying their conformity. Use of these accumulators in France is governed by decree dated 20 novembre 2017 (J.0. N°96).

Useful addresses:

- French legislation and application of directive 2014/68/UE: http://www.adminet.com/jo
- European legislation: http://europa.eu.int

Independent approved organisations: APAVE, TÜV, VERITAS...

PISTON PUMPS FOR TRUCKS

MOBILE & INDUSTRIAL PUMPS

HYDRAULIC MOTORS

HYDRO LEDUC offers 3 types of piston pumps The W range is composed of fixed perfectly suited to all truck and PTO-mount displacement pumps, and the DEL variable displacement pumps. The:

- Fixed displacement from 0.73 to 7.93 cu.in/rev (12 to 130 cc/rev)
- Fixed displacement, twin-flow, from 2x 1.53 to 4.58 cu.in (2x25 to 2x75 cc/rev)
- Variable displacement, with LS control (load sensing) from 2.44 to 9.15 cu.in/ rev (40 to 150 cc/rev).

The W range is composed of fixed displacement pumps, and the DELTA range, of variable displacement pumps. These pumps can operate at high pressures within minimal size.

▶ W and WA (SAE)* pumps:

- Fixed displac. from 0.73 to 7.65 cu.in/rev (12 to 125 cc/rev)
- ISO 3019/2 or SAE flanges.
- DIN 5480 or SAE shafts.

► TXVA pumps:

- Variable displac, from 2.44
 to 5.61 cu in/rev (40 to 92 co/rev)
- SAE shafts and flanges.

Fixed and variable displacement piston motors

- Models from 0.31 to 15.26 cu in/rev (5 to 250 cc/rev).
- Available in DIN and SAE versions
- In fixed displacement, special drainless motor.

^{*} For SAE version, please ask.

HYDROPNEUMATIC ACCUMULATORS

Complete catalogue available at www.hydroleduc.com

MICRO HYDRAULICS

Diaphragm, bladder, bladder-diaphragm and piston accumulators. Capacities from 0.005 to 13.21 gallons (0.02 to 50 liters).

- Operating pressure up to 5800 psi 400 bar
- Accessories for use with hydraulic accumulators.

This is a field of exceptional HYDRO LEDUC know-how:

- Axial and radial piston pumps, of fixed and variable displacement
- Axial piston micro-hydraulic motors
- Micro-hydraulic units incorporating pump, electric motors, valving, controls, etc.

HYDRO LEDUC offers complete, original and reliable solutions for even the most difficult environments, and within the smallest size envelopes. A dedicated R&D team means HYDRO LEDUC is able to adapt or create products to meet specific customer requirements.

Working in close cooperation with the decision-making teams of its customers, HYDRO LEDUC optimizes proposals based on the specifications submitted.

A passion for hydraulics
